

# Weekly Report

2018.04.02-2018.04.08

---

## Job Summary

In the past one month, I finished my task about line sampling for the contribution. I did some work in data processing, front-end and back-end development, and writing thesis. At the same time, I got some knowledge about NLP from Dr. Zhu and Master Tang. The whole process is tough because of the lack of experience and guidance. However, it's the truth that our group did our best and fought to the last moment. The thesis still has much left to be improved and many related knowledge need to be learned systematically.

## Work Plan

1. Study CUDA and particle sample for graduation project
2. read *Professional Javascript for Web Developers*
3. Restart the online study of machine learning
